

Introduction to our project

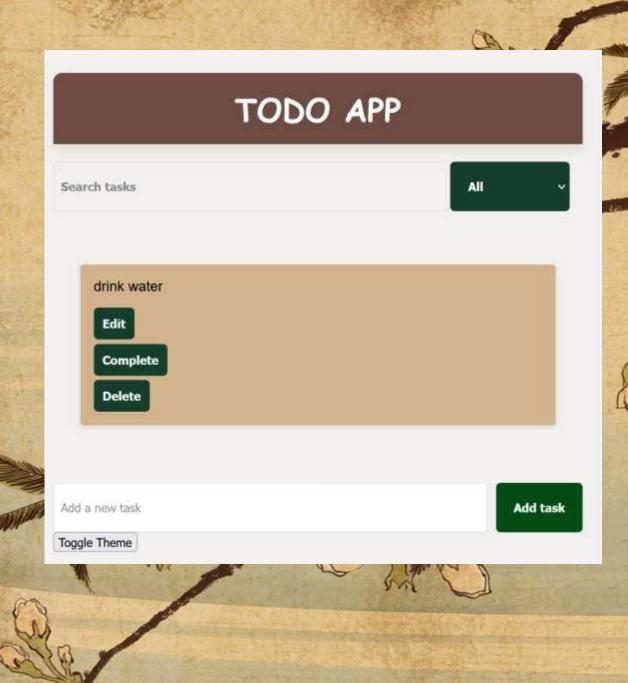

The Todo application offers a simple, functional, and visually appealing environment for managing your tasks. Users are greeted with a thoughtful design, featuring clean lines and easy navigation. Let's delve into the key aspects of the user interface.

We designed the layout with a focus on usability and simplicity. The interface provides flexible navigation, and its responsiveness adapts to various devices.

A modern color palette enhances the visual experience, while the option to switch between light and dark themes allows users to customize the appearance according to their preferences.

Technological Front-End Stack

The front-end of the application utilizes the following technologies:

HTML, CSS, JavaScript for the structure, style, and logic of the application.

Bootstrap for rapid and efficient UI development.

localStorage for local storage of tasks.

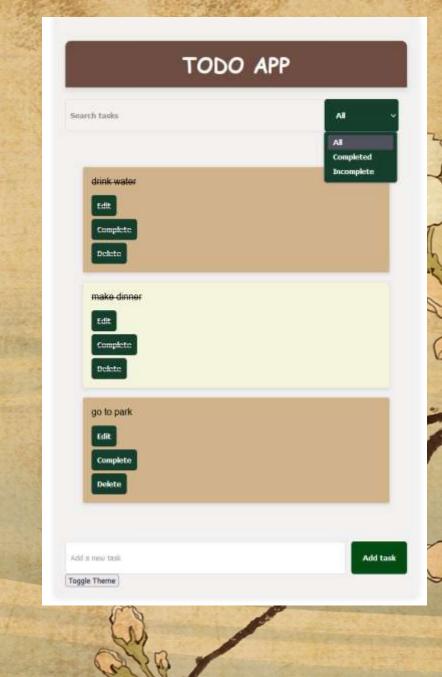

```
do.html X if script is
adohord ) @ html ) @ body ) @ divasp

Design Challenges

During the design process, we faced challenges in ensuring a balanced user experience. We aimed to maintain simplicity while adding useful features.

Next Steps

In the future, we plan to incorporate more features such as task sharing, reminders, and customization options. Continuous improvement relies on feedback from our user community.

Thank you for exploring our Todo App. We nvite you to try the live demo and share your thoughts for further enhancements.
